IT Asset Management

IT Asset Management (ITAM) is the practice of managing and tracking an organization's IT assets throughout their lifecycle. It involves the systematic approach of acquiring, deploying, maintaining, and disposing of IT assets, such as hardware, software, network devices, and licenses.

The primary goal of ITAM is to optimize the use, cost, and value of these assets while ensuring compliance with regulatory requirements and minimizing risks. This includes accurate inventory management, centralized asset tracking, software license management, vendor management, and asset lifecycle planning.

ITAM helps organizations make informed decisions regarding asset procurement, utilization, and retirement. By effectively managing IT assets, businesses can improve operational efficiency, reduce costs, mitigate security risks, and ensure regulatory compliance.

Poll Question

How would you rate the maturity of your IT Asset Management?

- 1 Our IT Asset Management process is **unpredictable and reactive**
- 2 We have an IT Asset Management process, **however it is often circumvented**
- 3 We have a well-defined and adhered to process – **it is often proactive**
- 4 Our IT Asset Management is measured, **controlled and continuously improved**
